

## Platinum Sponsor | IBM Platinum Partner

### Maximo Utility Working Group

---

Interloc Solutions is proud to be a Platinum Sponsor of MUWG 2026 and an IBM Platinum Partner supporting utilities across North America.

This year's theme —

“Maximo In Motion: Energizing Smart Systems through AI, People, and Processes” — reflects the transformation utilities are navigating today: aging infrastructure, workforce evolution, AI integration, and increasing operational demands.

MUWG remains a collaborative forum where member utility organizations exchange practical experience, proven methods, and measurable strategies to drive Maximo efficiency.

### **Moving Beyond Maintenance — Toward Performance**

Utilities can no longer rely on static enterprise systems. Maximo environments must be stable, scalable, intelligent, and aligned to long-term operational strategy.

At Interloc, we help utilities move from reactive maintenance to structured performance optimization.

Here's how.

### **IBM Maximo Application Suite (MAS) Modernization**

Modernization is more than upgrading versions — it's architectural alignment.

We deliver:

- Readiness assessments and environment audits
- Structured migration and [upgrade](#) roadmaps
- Kubernetes/OpenShift planning and deployment support
- Integration validation and risk mitigation
- Parallel testing strategies to protect production

Our goal is clear: Improve performance and scalability without disrupting daily operations. Stop by our booth at MUWG and learn more.

## **Performance Optimization & System Stabilization**

Many Maximo systems function — but are not optimized.

We identify and remediate:

- Database inefficiencies
- Automation and workflow sprawl
- Integration bottlenecks
- Infrastructure misalignment

Through structured diagnostics and targeted tuning, we improve response time, reliability, and user confidence across the environment.

## **Cloud Hosting & Managed Services**

Cloud strategy must enhance resilience — not introduce risk.

Interloc provides:

- Secure enterprise-grade hosting
- Proactive monitoring and performance oversight
- Patch management and coordinated upgrades
- Capacity planning and scaling support
- Backup, disaster recovery, and business continuity

Our managed services reduce infrastructure strain while ensuring predictable, stable performance aligned to utility operations. If you have not upgraded and moved to the cloud yet Interloc offers a Zero Downtime Upgrade that will keep you on track.

## **Data Quality & Asset Intelligence Strategy**

Maximo's value depends entirely on data integrity.

We help utilities:

- Restructure asset hierarchies
- Standardize classifications and coding
- Cleanse and validate production data
- Align KPIs to operational and funding objectives
- Establish governance frameworks for ongoing integrity

The result: stronger reporting, clearer lifecycle forecasting, and better capital planning decisions.

Clean data drives confident decisions.

## **Mobile Informer UX Suite: Mobility That Works in the Real World**

Field operations require tools that perform reliably — especially in low-connectivity environments common to utility work.

The [Mobile Informer UX Suite](#) is built specifically to support Maximo and MAS environments with:

- Offline-first architecture
- Real-time synchronization logic
- Configurable workflows aligned to technician execution
- Secure data capture and transmission
- Reduced field administrative burden

Technicians gain reliable access to work orders, inspections, and asset data — online or offline — without compromising data accuracy or system integrity.

This is mobility engineered for operational reliability.

### **Informer EdgeSync for MAS: Real-Time Environment Synchronization**

Traditional approaches to synchronizing Maximo data across environments have relied on expensive database mirroring tools or manual “lift and shift” duplication and relocation of databases between environments, resulting in frequent repeated effort and expense.

Built on the proven Mobile Informer Server, [EdgeSync](#) is a Maximo-based replication tool that provides real-time synchronization between environments. It removes the need for costly database replication tools, manual transfers, or ETL processing from production to test or development environments.

With EdgeSync, utilities gain:

- Controlled, real-time data replication
- Reduced operational overhead
- Lower infrastructure cost
- Improved development and testing efficiency
- Stronger environment consistency

It’s a smarter, more sustainable approach to Maximo environment management.

### **Why Meet with Interloc at MUWG?**

As an IBM Platinum Partner and MUWG Platinum Sponsor, we work directly within complex utility environments to strengthen performance, stability, and long-term system resilience.

Whether you are:

- Planning a MAS migration
- Improving system performance
- Modernizing mobility
- Stabilizing cloud architecture
- Strengthening asset intelligence, or
- Preparing for AI enablement

We bring structured execution, deep Maximo expertise, and measurable results.

### **Let's Connect**

Attending MUWG 2026? Stop by the booth and get to know us. If you'd like to schedule a demo, please do so [here](#).

Your Maximo environment should be an asset — not a bottleneck.  
Let's make sure it performs the way it was designed to.

## **About Interloc Solutions**

Interloc Solutions brings over 20 years of experience helping asset-intensive organizations modernize and optimize their enterprise asset management environments. We specialize in IBM Maximo and Maximo Application Suite (MAS), supporting upgrades, implementations, and long-term platform strategy. Our secure Cloud Services deliver scalable, reliable hosting for mission-critical systems. With the Mobile Informer UX Suite, we redefine mobility through offline-first, user-focused experiences that drive adoption and productivity. Backed by expert consulting services, Interloc partners with clients to solve complex challenges and deliver lasting value.
