

Informer EdgeSync for MAS

SOLUTION BRIEF

Enables reliable synchronization across Maximo environments

PRODUCT OVERVIEW

EdgeSync, built on Interloc's Informer Server, synchronizes Maximo through MBOs - eliminating costly database- or system-level mirroring tools. It bi-directionally syncs data between remote servers, even with intermittent connectivity.

EdgeSync enables zero-downtime upgrades from Maximo 7.6 to MAS, allowing teams to test, validate, and roll out in phases while live data syncs seamlessly. When ready, organizations can instantly cut over - confident that every record is accurate and up to date.

BENEFITS

Synchronize multiple environments from a single master node

Simplify updates to pre-production and reporting environments

Improve disaster recovery (DR) and continuity of operations planning (COOP) posture with real-time hot backup availability

Perform zero-downtime upgrades to Maximo Application Suite (MAS)

15+ years of demonstrated success of Informer Server

ZERO DOWNTIME UPGRADE

Move to Interloc's cloud and have the benefits of a zero downtime upgrade at no cost. Scan the QR code to learn more or contact us today to get started.
